XJ 8" Long Arm Lift Kit Installation Instructions

XJ 84-01 Jeep Cherokee

Shookligt

□ Ball 91117 (1)

☐ 10-32 x 1-3/4" Socket Head Cap Screw (6)

Parts Unecklist:			10-32 Nylock Nut (6)
BOX	1 33x17x8		90 Degree ¼"-28 Grease Zerk Fitting (1)
	Instructions	_	#72 - Leaf Spring Bushing Hardware (1)
	Invoice		Main eye bushing M20774 (4) Shackle bushing M20775(4)
	Iron Rock Off Road logo decal (2)		
	Ironrockoffroad.com decal (1)		Main eye bushing sleeve (2)
			Shackle bushing sleeve (2)
_	XJ/ZJ Adjustable double shear track bar (1) Track bar male threaded end (1)		#76 - Caster Adjuster Hardware (1)
	` '		5/16- x 1 ½ carriage bolt (4)
	XJ/ZJ Double shear track bar bracket (1)		M10 x 90 hex head bolt (1)
	Front sway bar links 11.25" center to center (2)		1/4 USS flat washer (4)
	2" Drop pitman arm (XJ5ARM)		3/8 USS flat washer (2)
	Front subframe center section (1)		5/16 hex nut (4)
	Front subframe left end (1)		M10 nylock hex nut (1)
	Front subframe right end (1)		#134 - IRO Shackle Hardware (1)
	XJ Brake line set (1)		IRO shackle bushing (4)
-	IRO Boomerang Shackle (1 pair)		IRO bushing sleeve (2)
<u>*BOX</u>	<u>2* 24x12x12</u>		☐ ¼" Straight grease zerk (2)
	8" Front coil springs (1 pair)	*BOX	<u>3* 24x6x6</u>
	U-Bolt set - specific to customer vehicle:		IRO Hydro
	Optional: for 8.8 91093 (4 U-bolts)		☐ Front shock SL2900F (2)
	9/16-20 high nut (8)		Rear shock LL2676F (2)
	9/16 hardened flat washer (8)		#15 - Shock Hardware (1)
	Optional: for Dana 35/44 91094 (4 U-bolts)		2.5" long front barpin (2)
	1/2-20 high nut (8)		2.75" long rear barpin (2)
	1/2 hardened flat washer (8)		<u>Doetsch Upgrade (Optional)</u>
	Optional: for Chrysler 8.25 91095 (4 U-bolts)		Front shock DT 8421 (2)
	1/2-20 high nut (8)		Rear shock DT 8368 (2)
	1/2 hardened fat washer (8)		#15 - Shock Hardware (1)
	#10 - Front Sway Bar Link Hardware (1)		2.5" long front barpin (2)
	☐ 3/4" hourglass bushing (4)		2.75" long rear barpin (2)
	12mm sway bar bolt sleeve (4)		Bilstein Upgrade (Optional)
	M12 x 70 cl10.9 hex bolt (2)		Front shock 33-185569 (2)
	M12 cl10.9 hex nut (2)		Rear shock 33-186559 (2)
	1/2 x 1 1/2" gr8 hex bolt (2)		#18 - Bilstein Shocks Hardware
	1/2 gr8 lock washer (2)		Front barpin 2.5" (2)
	1/2 gr8 hex nut (2)		Rear barpin 2.75" (2)
	Sway bar link u-bracket (2)		SBL U-bracket (2)
	#16 - Long Arm Subframe Hardware (1)		12mm Shock sleeve (2)
	1/2 x 6-1/2 gr8 hex bolt (2)		1/2 x 1 1/2 gr8 Hex Bolt (2)
	1/2 x 1 1/2 gr8 hex bolt (4)		1/2 gr8 Hex nut (2)
	☐ 1/2 gr8 hex nut (6)		☐ 1/2 USS Washer (2)
	☐ 1/2 gr8 lockwasher (6)		1/2 gr8 Lock washer (2)
	☐ 1/2 washer (7)		7/16 USS Washer (6)
	☐ M10 x 30 cl10.9 hex bolt (4)		☐ M12x60 cl10.9 Hex bolt (2)
	7/16 x 1 1/4 gr8 hex bolt (2)	*501	M12 cl10.9 Hex nut (2)
	☐ 3/8 flat washer (6)		<u>4* 42x15x7</u>
	#20 - Front Track Bar Hardware (1)		Front Iron Y and Passenger Side Lower Control Arm with bushings (1)
	☐ Track bar bushing half (4)		☐ Fixed
	7/16" I.D. track bar bushing sleeve (1)		☐ Adjustable (optional)
	7/16 x 2 1/2"lg gr8 hex bolt (1)		XJ/ZJ long arm male end (2)
	7/16 gr8 hex nut (1)		☐ 1/4" – 28 x 1.125" socket head cap screw (4)
	☐ 12mm track bar bushing sleeve (1)		☐ 1/4" – 28 Gr8. nut (4)
	7/16 flat washers (2)		Caster adjust bracket (1)
	☐ 12mm x 80 hex bolt, class 10.9 (1)	*BOX	5*
	☐ 12mm hex nut, class 10.9 (1)		IRO Add-a-Leaf XAAL2 (2 Leafs)
	☐ 7/8-14 jam nut		Center Pins (2)
	#127 - 2 5/8" 6 Bolt IRO Flex End Hardware (2)		3/8-24 Hex Nuts (2)
	☐ Inner race 91118 (2)		XJ 5.5" Leaf spring (90150) (2)
	☐ Thrust washer 91119 (2)	_	

Installation Instructions:

Safety Warning: ***Important! Read before installation. ***

Installing a suspension lift kit raises the center of gravity of the vehicle. This increases the possibility of a rollover accident. Avoid sudden maneuvers at high speed and avoid all situations where a side rollover may occur. In addition larger tires decrease braking performance, please drive accordingly. We recommend a tire and wheel combination that make the vehicle's track width wider (wheels with less backspacing than OEM). This will lower the center of gravity and add stability. We also recommend that this system be installed by a qualified professional. Knowledge of suspension component function is necessary for safe installation and post installation inspections. Be sure to re-torque all suspension components after the first 100 miles of use, and frequently inspect all safety critical suspension components.

Datara	1/0//	hoaini
Before	vou	
	,	~09

u	Read all safety warnings.				
	Read and understand installation instructions.				
	Check all steering and suspension components for wear and replace as needed.				
	Contact Iron Rock Off Road with any questions before, during, or after installation.				
	Ensure that all parts are present and in good condition using the included shipping checklist				
	Be sure you have the following tools and supplies:				
		Floor jack and jack stands			
		Basic hand tools			
		Multi-purpose grease (all poly bushings should be greased before installation)			
		Anti-seize compound			
		A coil spring compressor makes installation easier but is not required.			
		Hand Drill			
		1/2" drill bit			
		23/64" drill bit (.359" diameter)			
		7/16-14 Taper Hand Tap			

Prepare the parts for installation:

- 1. Locate hardware kit 15 and the rear shocks.
- 2. Grease and install the barpins into the top side of the rear shocks. It helps to use a press, or clamp the barpin vertically in a bench vise, and lower the shock onto the barpin while rotating the shock back and forth. Be sure to thoroughly grease the barpin and the shock bushing. If needed you can grind or file the corners of the barpin to provide a lead in surface. Remove any sharp edges to prevent damage to the shock bushing.
- 3. Install the front barpins by repeating the procedure in step 2.
- 4. Locate the front track bar and hardware kit 20.
- 5. Thread the jam nut onto the threaded end of the track bar.
- 6. Adjust the length to 33-3/4" front center to center as a starting point. This is the maximum length for this track bar. Verify that you have 1" minimum thread engagement. This may need to be adjusted after a short test drive. Do not tighten jam nut at this time.
- Lubricate track bar bushings and bushing sleeves with multi-purpose grease and install into track bar: smaller I.D. bushing sleeve is installed at axle end (without adjusting threads), and larger I.D. sleeve at unibody end (with adjusting thread).
- 8. Leave the rest of the hardware in the bag for future use.
- 9. Locate the front sway bar links, front sway bar link u-brackets, and hardware kit 10. (If you purchased JKS Sway Bar Disconnect system, refer to JKS instructions.
- 10. Grease and install the hourglass bushings.
- 11. Grease and install the sway bar link inner sleeves.
- 12. Leave the rest of the hardware in the bag for future use.
- 13. Locate the rear leaf spring shackle kit. If equipped with poly bushings, grease and install the poly bushings and inner bushing sleeves.

<u> Assemble Caster Adjuster</u>

- 14. Slide Caster adjuster on top of welded on u-shaped bracket as shown.
- 15. Insert the (4) 5/16" carriage bolts from the inside of the bracket outwards, engaging the square end of the carriage bolt into the welded-on bracket.
- 16. Install washers and nuts on the carriage bolts finger tight.
- 17. Once Iron Y is installed in vehicle, install washer onto the 10mm bolt and slide through the caster bracket assembly and upper control arm bushing. Add the last washer and nylock nut, torque to spec.

Lower control arm mounting subframe:

- 18. Lift front and rear of vehicle and support with jack stands under the front axle.
 - i. **Tip: break lug nuts loose before lifting vehicle.
- 19. Ensure that vehicle is safely supported.
- 20. Remove front and rear tires.
- 21. Remove the four nuts that fasten the transfer case mount to the transfer case crossmember.
- 22. Raise the transfer case slightly and support with a jack stand.
- 23. Remove transfer case crossmember.
- 24. Using a stud puller, remove the two crossmember mounting studs. If you do not have a stud puller, you can install 2 nuts and tighten one against the other then remove using a box end wrench on the inner nut.
- 25. Drill and tap the third mounting hole on each side (the next hole directly forward from the two crossmember mounting holes) using the 23/64 (.359" diameter) drill bit and 7/16-14 hand tap. Use plenty of oil during drilling and tapping.
- 26. Locate the front lower control arm mounting subframe pieces (3) and hardware kit 16.

- 27. Loosely assemble the three subframe pieces using provided 1/2 x 1-1/2 and 1/2 x 6-1/2 hex bolts, nuts, and washers where applicable.

 Assemble all bolts with nuts on the outside. The 6-1/2" long bolts on top of each side with nuts toward the rear (opposite "Iron Rock Off Road" text), lockwasher under each nut, no flat washer on the passenger side front lower bolt. The "IRON ROCK OFF ROAD" text faces forward with the open end of the lower control arm mounts. The upper holes drop the transfer case 1", or if you are using a transfer case slip yoke eliminator and CV driveshaft, use the lower holes. Tighten bolts finger tight.
- 28. Apply anti-seize to bolts and install the subframe and using provided M10 x 30mm bolts, 7/16 x 1-1/4" bolts, and washers. Tighten bolts finger tight.
- 29. Torque lower subframe to subframe nuts to 90 foot pounds.
- 30. Torque upper subframe to subframe bolts to 30 foot pounds.
- 31. Torque subframe to unibody bolts to 50 foot pounds for the rear four M10 bolts, and 65 foot pounds for the front two 7/16" bolts.
- 32. Lower the transfer case onto the subframe.
- 33. Install the four transfer case mount nuts and torque to 15 foot pounds.

Front Suspension:

- 34. Lift front of vehicle and support with tall jack stands under the unibody frame or transfer case subframe.
- 35. Ensure the vehicle is safely supported.
- 36. Place a floor jack under the front axle for support, do not lift vehicle.
- 37. Remove the front shocks.
- 38. Remove the track bar and mounting bracket at unibody. No need to separate track bar from bracket, just discard them both.
- 39. Remove front sway bar links.
- 40. Remove front brake hoses and install supplied extended length, braided stainless steel brake hoses. Be sure to route brake hoses away from any moving parts or pinch points. Route hoses so they will not rub against any other parts which could wear a hole in the brake line. Be sure brake lines are securely fastened to the unibody at the top side.
- 41. Remove driver's side upper and lower control arms. Loosen passenger side upper and lower control arms. Remove nuts but do not remove bolts.
- 42. With the axle hanging as low as possible, remove coil springs.
- 43. Locate Iron Y control arm.
- 44. Install Iron Y control arm on the driver's side. First install the axle end lower bushing into the axle and insert the bolt, then rotate up to install the arm onto the upper control arm bushing on the axle and insert the supplied m10 x 90 bolt, washers, and locknut.
- 45. Install the back side of the Iron Y control arm into the new lower control arm mounting bracket. Do not tighten bolts at this time.
- 46. Remove passenger side upper and lower control arms.
- 47. Install passenger side lower control arm. Do not tighten bolts at this time.
- 48. Install new springs in vehicle being careful to align the springs to the spring buckets on the axle.
- 49. Using a floor jack lift the front axle just enough to apply some load to the coil springs, do not lift vehicle.
- 50. Ensure that the vehicle is safely supported.
- 51. Locate front track bar, track bar mounting bracket, and hardware kit 20.
- 52. Install the track bar bracket onto the unibody with the factory bolts. Loosely attach the bracket with the upper two bolts, then align the lower bolt mounting holes. Install the lower mounting bolts and torque all track bar bracket hardware to 92 ft. lbs.
 - ***NOTE: If the unibody is rusty, the seam behind the factory bracket may have swelled making installation of the lower mounting bolts difficult. Using a ratchet strap to pull the bracket to align the holes or smoothing the seam with a hammer is recommended.
- 53. Install the track bar and torque bolt at axle to 74 foot pounds, and nut at bracket to 80 foot pounds. If necessary use a floor jack and/or the steering wheel to help align the track bar.
- 54. Tighten jam nut very tight.
- 55. Re-install coil spring retainer clamps.
- 56. Install new front shocks using original barpin bolts. Tighten upper stud mount nuts just enough to slightly compress the bushings. Over compressing these bushings will result in damage to the bushings and premature bushing failure.
- 57. Locate front sway bar links (11.25" center to center), two u-brackets, and the remainder of hardware kit 10. If you purchased JKS Quicker Disconnects follow JKS instructions, then proceed to step 55.
- 58. Install sway bar link u-brackets to the sway bar using 1/2 x 1 1/2" grade 8 hex bolts, lock washers, and nuts. Brackets mount to the bottom of the sway bar with the bolt facing up and the lock washer and nut on top of the sway bar. Rotate the bracket so it is offset away from the center of the vehicle. Align brackets, torque bolts to 80 foot pounds.
- 59. Install sway bar links driver's side first using provided M12 x 70mm class 10.9 hex bolt and nut through the u-bracket with the nuts toward the outside of the vehicle, and the original bolt, nut, and washer at the axle. Tighten all bolts to 78 foot pounds.
- 60. Remove drag link (goes from pitman arm to passenger side steering knuckle). Leave steering stabilizer attached to drag link. Add a bend, just above where the tie rod connects. Bend roughly 5 degrees outward, or just enough to clear the sway bar mount while turning with the suspension fully drooped.
- 61. Remove pitman arm. Note clocking of pitman arm.
- 62. Install new drop pitman arm. Torque to 185 foot pounds.
- 63. Install drag link and verify it clears the sway bar link mount.
- 64. Raise vehicle and reposition jack stands under the front axle.
- 65. Ensure that vehicle is safely supported.
- 66. Any remaining loose bolts will be torqued after rear suspension installation.

Rear Suspension:

- 67. Lift rear of vehicle and support with tall jack stands under the unibody frame.
 - i. **Tip: break lug nuts loose before lifting vehicle.
- 68. Ensure that the vehicle is safely supported.
- 69. Remove rear tires.
- 70. Place a floor jack under the center of rear axle for support (do not lift vehicle).
- 71. Remove rear shocks.

- 72. Remove and temporarily plug rear brake line.
- 73. Remove leaf springs and shackles from the vehicle.
- 74. Install add-a-leaf kit into leaf springs.
- 75. Apply anti-seize to bolts and install new leaf spring shackles. Do not tighten bolts at this time.
- 76. Apply anti-seize to bolts and install new leaf springs into the unibody. Do not tighten bolts at this time.
- 77. Install new U-Bolts. Do not tighten at this time.
- 78. Raise vehicle and reposition jack stands under the rear axle.
- 79. Ensure that the vehicle is safely supported.
- 80. Torque U-Bolts to 90 foot pounds.
- 81. With the weight of the vehicle on the springs, torque leaf spring and shackle bolts to 120 foot pounds.
- 82. Install rear brake line.
- 83. Grease lower shock studs, apply anti-seize to upper bolts and install rear shocks using original hardware.
- 84. Torque lower shock bolts to 46 foot pounds.
- 85. Torque upper shock barpin bolts to 17 foot pounds.
- 86. Bleed the front and rear brakes. See service manual for brake bleeding procedure.
- 87. With the weight of the vehicle on the front and rear springs, torque any loose bolts to spec. front and rear.
- 88. Torque all lower control arm nuts to 120 foot pounds.
- 89. On the front axle, set the caster adjuster on the Iron Y all the way up as a starting point. Torque upper control arm nut to 60 foot pounds. Torque the four locking nuts to 15 foot pounds.
- 90. Torque any remaining loose bolts to spec.
- 91. Install tires and place the vehicle on the ground.
- 92. Torque lug nuts to spec. (85-115 foot pounds depending on your wheels)

<u> Adjustments and Final Inspection:</u>

- 93. Check all components for clearance for suspension to fully cycle up and down and wheels to turn lock to lock. Pay special attention to brake lines, axle vent hoses, and ABS wires. Reposition as needed by bending the brackets, relocating, or extending hoses and wiring.
 - * A professional front end alignment is required after installation. We recommend the following alignment settings:

Caster: +2.75 to +5.75 (+4.0 is preferred if possible)

Toe-in: +1/16" to +1/8"

94. Check caster angle. Using a laser level or string level, set the front axle level to the rear axle (left side and right). Bounce the Jeep up and down to ensure the suspension is in resting position (at exact ride height). Place the angle finder under the axle "C" (or on top of the upper ball joint). Ensure the angle finder is parallel to the Jeep front to rear. This is your caster angle.

Final Safety Warning:

* Re-torque all fasteners after 100 miles, and frequently inspect all safety critical suspension components. It is the responsibility of the installer to be sure all fasteners are properly tightened after installation and to ensure the owner knows his/her ongoing responsibility. It is the responsibility of the owner of the vehicle to be sure all safety critical components are inspected frequently, especially after off road or other demanding use.

XJ 8 inch critical path long arm kit install.doc Revision 1.0

Assembly Instructions

Fits All Iron Rock Off Road Long Arm Systems, WJ A-Arms, and Build Your Own Flex End Assemblies.

Parts Checklist:

Outer housing, weld on (may already be attached to your existing control arm) #127 - 2 5/8" 6 Bolt IRO Flex End Hardware

☐ Inner race 91118 (2)

☐ Thrust washer 91119 (2)

□ Ball 91117 (1)

☐ 10-32 x 1-1/4" Socket Head Cap Screw (6)

☐ 10-32 Nylock Nut (6)

☐ 90 Degree ¼"-28 Grease Zerk Fitting (1)

Before you begin:

- Read and understand installation instructions.
- Contact Iron Rock Off Road with any questions before, during, or after installation.
- Ensure that all parts are present and in good condition per attached shipping checklist!
- Have these tools handy:
 - 5/32 allen head socket
 - o 3/8 open end wrench
 - Inch-lb. torque wrench

Assembly:

- Insert two 10-32 socket head cap screws into one thrust washer and one plastic race. Spherical bore
 of race facing away from thrust washer.
- Install this small assembly into the flex end housing. The races are a light press fit, use a wide punch and hammer to assist you if needed.
- 3. Apply a thin coating of multi-purpose grease to the mating surfaces of the ball and both races.
- Place the ball in the race (inside the flex end). The ball should perfectly fit the contour of the race.
- 5. Insert the other race onto the ball so that the spherical bore is contacting the ball. Once again, the races are a light press fit, use a hammer and wide punch if needed. (The two screws should be through one washer and both races at this point)
- 6. Insert the second thrust washer on top of the flex end housing, sliding the bolts through the holes.
- 7. Start Nylock nuts on the two bolts that are in the flex end assembly. Hold the nut and turn the bolt.
- 3. Insert the remaining four cap screws through the remaining holes and install nuts.
- 9. Snug up all of the bolts fairly tight.
- Torque bolts evenly starting at one bolt using a crisscross pattern, like torqueing lug nuts.
 Torque all six bolts to 70 in/lbs., then to 85 in/lbs.
- 11. Install 90 Degree grease zerk fitting so that it is easily accessed in the vehicle.
- 12. Grease flex end until grease comes out of the races around the ball.
- 13. Re-torque bolts to 85 in-lbs. after 5 minutes.

Shipping Checklist:

Hardware Kit # 72

- Instructions
- ☐ Main Eye Leaf Spring Bushings (4) M20774
- ☐ Leaf Spring Shackle Bushings (4) M20775
- ☐ Main Eye Bushing Sleeve (2)
- ☐ Shackle Bushing Sleeve (2)

Installation Instructions:

Before you begin:

- Read and understand installation instructions.
- Contact Iron Rock Off Road with any questions before, during, or after installation.
- Ensure that <u>all parts</u> are present and in good condition per attached shipping checklist.
- You will need basic wheel bearing multi-purpose grease and a brush.

Bushing Installation:

- 1. Locate main eye bushings (M20774) and main eye bushing sleeves (M20775) and separate from other parts.
- 2. Liberally apply grease to the inside of the leaf spring main eye bushing opening.
- 3. Apply grease to bushing halves on mating surface and sleeves.
- 4. Press one bushing half into main eye bushing opening.
- 5. Press the other bushing half into the main eye bushing opening on the opposite side of the first half.
- 6. Apply grease to the bushing sleeve and slide it into the two bushing halves.
- 7. Mimic the main eye installation for the shackle bushings using shortest sleeves and thinner flange bushing halves.
